

LIBERTY CYBER THREAT INTELLIGENCE

THE ALAMO THREAT BRIEF™

OPEN SOURCE INTELLIGENCE

ISSUE	ATB-2026-1
COVERAGE PERIOD	16 March 2026
PUBLICATION DATE	2026-03-16
THREAT POSTURE	Elevated — Iran-linked retaliation activity ongoing across all sectors

Executive decision intelligence for Texas critical infrastructure.

Liberty CTI

The Alamo Threat Brief™

Weekly cyber threat intelligence for Texas industry — designed for fast executive consumption with short, source-backed assessments.

Issue:

ATB-2026-1

Week of:

16 March 2026

Coverage:

Energy · Finance · Healthcare · Defense · Gov · Tech

Elevated — Iran-linked retaliation activity ongoing across all sectors

This Week's Threats — 10–16 March 2026

ENERGY

Qilin ransomware targets Texas electric cooperatives; ERCOT grid probing persists

Summary: The Qilin ransomware gang — with confirmed Russian ties — claimed attacks on San Bernard and Karnes Electric cooperatives, leaking financial records and board-director PII. Incident follows sustained probing of Texas LNG export infrastructure.

Assessment: Qilin will almost certainly leverage exfiltrated director PII for targeted spearphishing against adjacent co-ops and upstream LNG operators. The gang's pattern — publish, then pivot — suggests a follow-on intrusion attempt against a larger Texas grid asset within 30–60 days, likely using stolen credentials from the initial breach as the entry vector.

FINANCE

NY DFS warns financial sector of heightened Iranian cyber threats amid U.S.-Iran

conflict

Summary: NY DFS issued an emergency advisory on 3 March tied to ongoing U.S.-Israel operations against Iran. Iran-aligned Hydro Kitten has signaled intent to target U.S. financial infrastructure. AI-driven phishing against finance teams is accelerating.

Assessment: Hydro Kitten will likely shift from reconnaissance to disruptive DDoS against U.S. financial platforms as Iran seeks visible retaliation options short of kinetic escalation. Texas-based payment processors and regional banks are probable secondary targets — large enough to generate political signal, small enough to lack enterprise-grade DDoS mitigation.

HEALTHCARE

Iran-linked Handala claims Stryker cyberattack; Senate advances healthcare cyber bill

Summary: Iran-affiliated hackers disrupted Stryker's global Microsoft environment — the first major U.S. healthcare supply-chain strike since U.S.-Iran hostilities escalated. Senate advanced bipartisan legislation requiring MFA, encryption, and HHS incident-response frameworks.

Assessment: Handala will likely expand beyond Stryker to other U.S. medical device and pharma manufacturers to sustain political pressure during the conflict. The group has demonstrated a preference for targets with high public visibility and downstream hospital dependencies — expect additional supply-chain disruptions timed to U.S. military operational tempo against Iran.

DEFENSE

Salt Typhoon telecom espionage continues; Texas orders review of Chinese-made medical devices

Summary: China's Salt Typhoon APT has compromised 200+ firms across 80 countries, focusing on wiretap systems and defense-adjacent communications. Texas ordered a cybersecurity review of state agencies' Chinese-manufactured medical devices after federal warnings.

Assessment: Salt Typhoon will almost certainly use its persistent telecom access to map the communications patterns of Texas-based defense contractors and cleared personnel — building a targeting package for future collection rather than immediate disruption. The Chinese-device review is likely to surface undisclosed access points; MSS will move to deactivate or obfuscate implants before formal remediation orders are issued.

GOVERNMENT

FBI flags impersonation campaign targeting permit applicants; Texas municipalities remain exposed

Summary: FBI warned of a U.S.-wide phishing campaign impersonating local officials to steal permit

payments via publicly available zoning data. Texas cities including McKinney, Coppell, and Richardson disclosed attacks over the past year.

Assessment: The impersonation operators behind this campaign will almost certainly expand their target set from permit applicants to utility payment portals and tax collection systems — higher-value transactions with the same OSINT-rich zoning and property records as a data source. Ransomware actors monitoring the Mission, TX incident will likely probe other border-region municipalities, anticipating that crisis-mode governments pay faster.

TECHNOLOGY

AI-generated "Slopoly" malware enables Interlock ransomware dwell; White House demands active defense

Summary: AI-generated malware "Slopoly" gave Interlock ransomware operators undetected access for over a week before exfiltration. The White House's 6-pillar National Cybersecurity Strategy (6 March) formally calls on the private sector to actively hunt and disrupt adversary networks.

Assessment: Interlock will use the Slopoly dwell-time advantage to replicate this playbook against additional managed service providers — AI-generated malware lowers their tooling cost while extending pre-exfiltration access windows. As the White House strategy increases private-sector threat-hunting pressure, Interlock and similar groups will likely accelerate their intrusion-to-extortion timelines to outpace newly mandated detection capabilities.
