

LIBERTY CYBER THREAT INTELLIGENCE

THE ALAMO THREAT BRIEF™

OPEN SOURCE INTELLIGENCE

ISSUE	ATB-2026-13
COVERAGE PERIOD	31 MAY–6 JUN 2026
PUBLICATION DATE	2026-06-07
DOMINANT JUDGMENT	THE GRID IS THE ATTACK SURFACE

Executive decision intelligence for Texas critical infrastructure.

ATB-2026-13 covers the week of May 31–June 6, 2026. Two events define this issue: a confirmed eight-agency federal warning of active adversary exploitation of automatic tank gauge systems across U.S. fuel infrastructure, and the disclosure that four Texas data center and crypto facility groups failed ERCOT voltage ride-through tests—meaning they could abruptly disconnect and amplify a grid disturbance during peak summer demand. These are not separate problems. They are the same attack surface. Simultaneously, the Five Eyes issued an unprecedented joint bulletin on Chinese military intelligence recruiting via LinkedIn, and the Iran ceasefire frayed visibly on June 5. This issue covers all four adversary actors with direct Texas implications.

Isolate ATG Systems Now

Eight agencies confirmed active exploitation of internet-exposed automatic tank gauges in fuel, chemical, and transport infrastructure. Password changes are insufficient. Network isolation is the required action.

Register for CIRCIA Town Halls

Sector-specific input sessions run June 15–18. Energy, finance, healthcare, and DIB sessions each cover different scope thresholds. This is the last structured window before the final rule sets compliance obligations.

Brief the Board on Grid Risk

ERCOT confirmed peak demand could exceed 92 GW this summer—a new record. Four large load groups already failed voltage tests. Continuity plans that assume grid stability are no longer defensible.

CENTERPIECE ANALYSIS

The June 2 ATG advisory and the June 5 ERCOT voltage test disclosures, read together, reveal that the adversary attack surface and the grid reliability risk are now the same problem. Threat actors are actively exploiting internet-exposed fuel monitoring systems. Simultaneously, the grid's largest new demand sources—AI data centers and crypto facilities—are failing the stability tests that would prevent them from becoming instability amplifiers during a disturbance.

The threat does not require a sophisticated intrusion. ATG manipulation causing a fuel distribution disruption, timed to a grid disturbance during peak summer demand, could cascade across healthcare, logistics, and financial services without a single catastrophic attack. Texas sits at the center of this convergence: the state hosts the most AI compute load under development, operates a historically isolated grid, and is entering its highest-demand summer on record.

Section I

Key Judgments**KJ-1**

Texas energy and logistics infrastructure faces elevated operational risk this summer from the intersection of confirmed adversary OT targeting, ERCOT grid instability pressure, and the dependency gap between how fast AI and crypto load is connecting and how its grid behavior is modeled. **HIGH CONFIDENCE**

Source basis / uncertainty: Basis: CISA/FBI/NSA/DOE/EPA/TSA/DOT/USDA joint ATG advisory (June 2); ERCOT May 21 internal report; ERCOT Board statements June 3 (Jeff Billo on record). Primary uncertainty: no confirmed Texas ATG compromise identified this week; this is an analytic inference from confirmed national-level exploitation and local infrastructure density.

Decision implication: Decision Implication: Continuity plans built on grid stability and uninterrupted fuel supply must be stress-tested before July 4.

KJ-2

China and North Korea are running structurally identical human access operations through professional networking platforms simultaneously. Texas DIB contractors, AI developers, and cleared personnel face a multi-adversary insider threat environment that a single vetting policy must address.

HIGH CONFIDENCE

Source basis / uncertainty: Basis: Five Eyes "Safeguarding Our Secrets" bulletin (June 3, 2026); DOJ DPRK RevGen Initiative sentencing records (April 2026). No Texas-named victim identified this week.

Decision implication: Decision Implication: Pre-hire vetting and contractor access reviews should be elevated for any role touching classified programs, AI development, or crypto custody.

KJ-3

The April 8 U.S.-Iran ceasefire is fraying. Iran's active OT disruption campaign against U.S. critical infrastructure (confirmed since March 2026) has not stood down. A ceasefire collapse would **almost certainly** produce an immediate surge in Iranian cyber operations against energy, water, and fuel infrastructure. **HIGH CONFIDENCE** on intent; **MODERATE CONFIDENCE** on timeline.

Source basis / uncertainty: Basis: CISA advisory AA26-097A (April 7, 2026); CENTCOM public statement June 5; CNN/Gulf News live coverage of Gulf of Oman incident. ATG campaign attribution to Iran not formally established—treated as plausible, not confirmed.

Decision implication: Decision Implication: Texas energy and fuel operators should treat the ceasefire as temporary and maintain elevated OT monitoring posture.

Section II

Geopolitical Environment — The Four Actors

Developments from 31 May–6 June 2026 assessed for secondary and tertiary implications to Texas operators. Strategic signal only—no tactical detail.

China — Human Intelligence Pivot at Scale

On June 3, the Five Eyes alliance issued its first-ever joint public bulletin warning that Chinese military intelligence is systematically recruiting government, military, and defense personnel through LinkedIn, Indeed, and Upwork using fake HR firms and bogus analyst roles. The joint, public character of this advisory is the signal: Five Eyes agencies coordinate publicly only when a campaign has reached sufficient scale to require collective deterrence. For Texas, JBSA-area contractors, cleared veterans, and defense-adjacent researchers are the target profile. This campaign runs parallel to Volt Typhoon's confirmed pre-positioning in U.S. critical infrastructure—one collects credentials and human intelligence; the other maintains persistent technical access. Both are part of the same collection architecture.

Russia — Stalemate Preserves Pre-Positioning Incentive

No new Russian advisory was issued this week. Diplomatic efforts toward a Ukraine ceasefire remain stalled; brief holiday truces (April, May) were violated by both sides. The structural conditions driving Russian cyber escalation are unchanged. GRU-linked Sandworm (APT44) continues a confirmed, multi-year campaign targeting Western energy sector edge devices and cloud infrastructure, documented through 2026 by Amazon threat intelligence. Texas LNG export terminals and pipeline operators remain inside the assessed target set. No current-week escalation indicator—but no peace framework either.

Iran — Ceasefire Fraying; OT Campaign Active

The April 8 ceasefire is visibly stressed. On June 5, Iran's navy claimed it fired warning shots at U.S. destroyers in the Gulf of Oman; CENTCOM denied the vessels were fired upon and called any such action a "gross violation of the ceasefire." Israeli operations against Hezbollah in Lebanon are intensifying; Hezbollah rejected the Lebanon ceasefire and is not party to the U.S.-Iran agreement. A permanent deal remains contingent on disputed frozen asset terms. Iranian-affiliated APT actors have been confirmed disrupting U.S. OT since March 2026 (CISA AA26-097A). FBI and CISA have specifically warned that Iranian-affiliated groups may act independently of ceasefire terms. Texas petroleum storage, pipeline OT, and fuel distribution are inside the assessed Iranian targeting envelope. A ceasefire collapse is the key escalation signal to watch.

North Korea — Financial Warfare and Platform Overlap

DPRK-attributed actors stole approximately \$577 million in cryptocurrency through April 2026, accounting for 76% of global recorded crypto losses, driven by two high-value attacks (Drift Protocol and KelpDAO). DOJ's April 2026 sentencing records from the RevGen Initiative confirmed DPRK IT workers successfully

penetrated military contractors and AI companies. The structural overlap with China's LinkedIn campaign is not coincidental—professional platform recruitment is now the dominant human access vector across multiple adversaries simultaneously. Texas financial institutions with crypto asset exposure, fintech operators, and any organization with DPRK-attractive remote work structures should treat this as an active targeting environment, not a theoretical risk.

CRITICAL INTELLIGENCE WARNING

Four-Actor Convergence: All four adversaries are targeting the same two vulnerability surfaces this week—human access via professional platforms (China, DPRK) and internet-exposed OT (Iran, Russia). The same two control points—pre-hire vetting and OT network isolation—address threats from all four actors simultaneously. This is not a coincidence; it reflects where U.S. critical infrastructure is weakest.

Section III

Cross-Sector Implications

Energy OT & Grid Stability	The ATG advisory is a network architecture problem, not a patch advisory. Systems that should never have been internet-connected are reachable on port 10001. Shadowserver confirmed 909 U.S. exposures on June 5. A compromised ATG can mask fuel levels, generate false leak alerts, or create safety incidents. Isolation is the required action. Separately, ERCOT has documented 26 abrupt data center disconnection events since 2023. Four more failed voltage ride-through tests in May. If an adversary induces a grid disturbance during peak summer demand, these facilities become instability amplifiers. Grid stability cannot be assumed as a continuity planning input this summer.
Finance CIRCIA & Macro Risk	The May jobs report (172,000 added; BLS, June 6) drove the 10-year Treasury above 4.54% and the Nasdaq down over 4%. Rising rates historically correlate with deferred security investment and reduced third-party vendor oversight—directly compounding CIRCIA compliance risk. The June 18 CIRCIA town hall covers financial services. This is the final structured opportunity to shape scope, burden, and reporting thresholds before the final rule sets obligations. Texas banks, credit unions, and insurance carriers that have not engaged should treat this week as the last actionable window. DPRK is an active adversary for any Texas institution with crypto asset exposure or digital custody services.

**Healthcare / DIB /
AI CIRCIA, Insider
Threat, Grid**

Healthcare ransomware pressure remains elevated (per ATB-2026-10, ATB-2026-11; no new Texas-named incident this week). The June 16 CIRCIA session covers healthcare and public health. The threshold question for health system leadership: does a ransomware event affecting your revenue cycle clearinghouse constitute a “covered cyber incident”—and who is your designated reporter? For DIB contractors: the June 18 session covers defense industrial base. DFARS obligations may impose more stringent CIRCIA requirements. JB-SA-area contractors should treat the Five Eyes China advisory as a direct personnel security requirement, not background noise. For AI infrastructure operators: the ERCOT voltage test failures are a current-cycle interconnection risk, not a future planning issue. Expect redesign requirements, delayed timelines, and heightened PUCT scrutiny as Batch Zero rules advance toward a June 18 vote.

Section IV

Indicators to Watch

IND 1 ATG Operational Impact [↑ *Rising*]

→ CISA or FBI confirms operational disruption at a U.S. fuel or chemical facility linked to ATG compromise—masked fuel levels, false leak alerts, or regulatory shutdown. Transitions the campaign from access to harm. Timeframe: 1–2 weeks.

IND 2 ERCOT Summer Reliability Action [↑ *Rising*]

→ ERCOT issues Conservation Appeal, Emergency Alert, or EEA Level 1 before July 4—particularly if coinciding with abrupt large-load disconnection. Watch also for PUCT finalizing Batch Zero ride-through rules at its June 18 vote, which could force data center disconnections. Timeframe: 2–6 weeks.

IND 3 ATG Attribution [→ *Sustained*]

→ Federal agencies formally attribute the ATG campaign to a nation-state actor. Iran is the assessed leading suspect based on prior multi-state ATG investigation reporting. Formal attribution shifts the threat from opportunistic exploitation to deliberate infrastructure coercion. Timeframe: 2–4 weeks.

IND 4 Iran Ceasefire Status [↑ *Rising*]

→ Gulf of Oman naval incident (June 5) represents active ceasefire stress. Watch for CENTCOM-confirmed hostile fire, Israeli strikes on Iranian territory, or Iranian-affiliated hacktivist escalation claims against U.S. energy targets. Any of these would signal transition from competition to crisis-phase OT operations. Timeframe: 1–3 weeks.

IND 5 CIRCIA Final Rule Signal [→ *Sustained*]

→ Post-town-hall CISA communications (June 15–18) signaling scope expansion or contraction for covered entities. Expanded definitions trigger immediate compliance escalation inside Texas operators. Narrowed definitions reduce near-term burden but reduce incident visibility. Either outcome reshapes the governance posture of every Texas critical infrastructure operator. Timeframe: 4–8 weeks.

Section V

Governance Implication Block

Decision at risk	Whether ATG systems have been isolated from internet access and CIRCIA reporting obligations have been assigned before the June 15–18 town halls close the stakeholder input window.
Owner	CISO / COO / General Counsel, jointly. ATG isolation is an OT operations decision. CIRCIA designation is a legal and compliance decision. Neither can be delegated to IT alone.
Consequence of delay	ATG systems that remain internet-exposed after a confirmed active exploitation campaign have no defensible posture in a regulatory inquiry or liability proceeding following an incident. Organizations that miss CIRCIA town halls waive their most direct opportunity to shape compliance thresholds before they are fixed.
Action this week	1. Direct OT team to confirm internet exposure status of all ATG systems and isolate any exposed systems from internet access—isolation, not password hardening. 2. Register for the applicable CIRCIA town hall before June 13 (two-business-day registration deadline). 3. Assign CIRCIA reporting designate in writing before June 18. 4. Brief board or risk committee on ERCOT voltage failures and summer continuity assumptions this week.
Record to preserve	Board minutes documenting awareness of the June 2 ATG advisory and ERCOT findings. Written CIRCIA reporting authority assignment. ATG isolation assessment or accepted-risk documentation. CIRCIA town hall registration or participation records.

Texas DIR — Cybersecurity Functions Transition to Texas Cyber Command

dir.texas.gov/news/cybersecurity-functions-transition-texas-cyber-command

April 9, 2026. Confirms TXCC operational status and Dec. 31, 2026 full transfer deadline.

INTELLIGENCE COMMUNITY

FBI/MI5/CSIS/ASIO/NZSIS — Joint Bulletin: “Safeguarding Our Secrets”

fbi.gov — [joint bulletin via Five Eyes partner agencies](#)

June 3, 2026. First-ever joint Five Eyes public advisory on Chinese military intelligence LinkedIn recruitment. Basis for KJ-2 and China section.

SECONDARY

ERCOT Board Meeting — Reported by E&E News (Shelby Webb) / Reuters (Tim McLaughlin)

eenews.net/articles/texas-advances-major-grid-rules-for-data-centers/

June 3–5, 2026. Cites ERCOT May 21 internal report and on-record statements by ERCOT VP Jeff Billo and CEO Pablo Vegas. Credible secondary citation of primary ERCOT filings.

SECONDARY

TRM Labs — North Korea Crypto Theft Attribution 2026

trmlabs.com/resources/blog/

April 30, 2026. DPRK attributed \$577M through April 2026; 76% of global recorded crypto losses. TRM Labs is a recognized blockchain intelligence firm. Basis for DPRK section.

TORCH FUSION CYCLE

WHAT: Eight federal agencies confirmed active adversary exploitation of automatic tank gauge systems across U.S. fuel and energy infrastructure (June 2). ERCOT disclosed four data center and crypto facility groups failed voltage ride-through tests, confirming Texas's largest new grid loads may amplify rather than absorb disturbances (June 5). The Five Eyes issued their first-ever joint advisory on Chinese military intelligence LinkedIn recruitment targeting DIB and cleared personnel (June 3). The Iran ceasefire frayed visibly at sea on June 5.

WHO: ATG campaign: unattributed federally; Iran assessed as leading suspect. ERCOT failures: unnamed large load operators. Most exposed this week: Texas fuel distributors and pipeline OT operators; JBSA-area DIB contractors; Texas health systems and finance firms facing CIRCIA deadlines; AI data center operators awaiting PUCT Batch Zero vote June 18.

WHY: Texas is the concentration point for U.S. AI compute infrastructure, LNG export capacity, and energy market pricing. Adversaries do not need to defeat every target. They need to disrupt the weakest accessible link in the dependency chain. Internet-exposed ATG systems are that link. Voltage-unstable AI loads are the amplifier.

WHAT NEXT: CIRCIA town halls begin June 15. PUCT Batch Zero vote June 18. Peak summer demand weeks away. ATG systems still exposed have no defensible posture. The governance clock is running.
